CyberCX is Australia's leading independent cyber security services organisation. To support rapid growth, we are currently hiring experienced penetration testers and security consultants to join our Canberra team.

We are building Australia's greatest security assurance team. As a CyberCX consultant, you'll be delivering world-class penetration testing engagements to empower our clients to operate safely and effectively. We are looking for passionate professionals who have deep technical knowledge and are continuously looking to grow and develop their skills.

We have multiple roles available and are open-minded about location and background (we have offices in most Australian capital cities). If you're a talented, intellectually curious penetration tester looking for your next home, CyberCX may be the place for you.

You'll be responsible for:

- Working with a diverse range of customers to identify and solve security problems, both in person and remotely.
- Delivering a wide range of security assurance services, including but not limited to web application penetration tests, network and infrastructure penetration tests and vulnerability assessments.
- Performing social engineering engagements and physical security assessments and/or undertaking secure code reviews, where appropriate.
- Preparing high quality reports detailing security issues, making recommendations, and identifying solutions.
- Working collaboratively with your team and clients to continuously grow and share knowledge.

About you:

- 2+ years in penetration testing. Ideally with some experience in a consulting environment (note: this level of experience is a guide, not a requirement).
- Passionate about offensive security and security assurance. You must genuinely love your craft and want to excel.
- Able to work collaboratively and independently, depending on project and team requirements.
- Continuously looking to grow and develop your technical and professional skills – a proven track record of self-initiated learning and involvement in the pen testing/hacking community is highly regarded.
- Industry recognised certifications in penetration testing (CREST CCT or CRT, OSCP, SANS, etc) are regarded highly, but not required.
- AGSVA clearance regarded highly, but not required.

What's in it for you?

- Once-in-a-career growth opportunities. A unique chance to be part of high-growth business changing the face of Australian cyber security.
- Diverse projects. We're committed to making sure you're not doing the same kind of work repeatedly with engagements across 30 service lines and every industry vertical.
- Work with industry thought leaders to deliver world-class services.
- A dynamic, independent environment, where you're given flexibility to do your best work.
- Opportunities for learning and development with a dedicated training function and training budgets within our practice for internal and external training, conference attendance and certifications.
- Employee benefits including comprehensive leave with the option to purchase additional leave, salary packaging options, employee assistance program, health cover discounts and reward schemes.

About CyberCX

CyberCX has united Australia and New Zealand's most trusted cyber security companies to deliver the most comprehensive end to end cyber security services offering to enterprises and governments. With a workforce of over 900 cyber security professionals and a footprint of over 25 offices across Australia and New Zealand and global presence in Europe and US, CyberCX offers a full suite of cyber security services.
